OUR SOLUTION

OmniSight AI — Parametric Income Protection

WHAT IS IT?

OmniSight AI is an AI-powered parametric income protection platform that automatically detects external disruptions and triggers instant compensation for gig delivery workers — with zero manual claims.

Extreme Weather
Rain · Floods · Heat · AQI

Social Disruptions
Curfews · Strikes · Shutdowns

Platform Outages
App crashes · Server failures

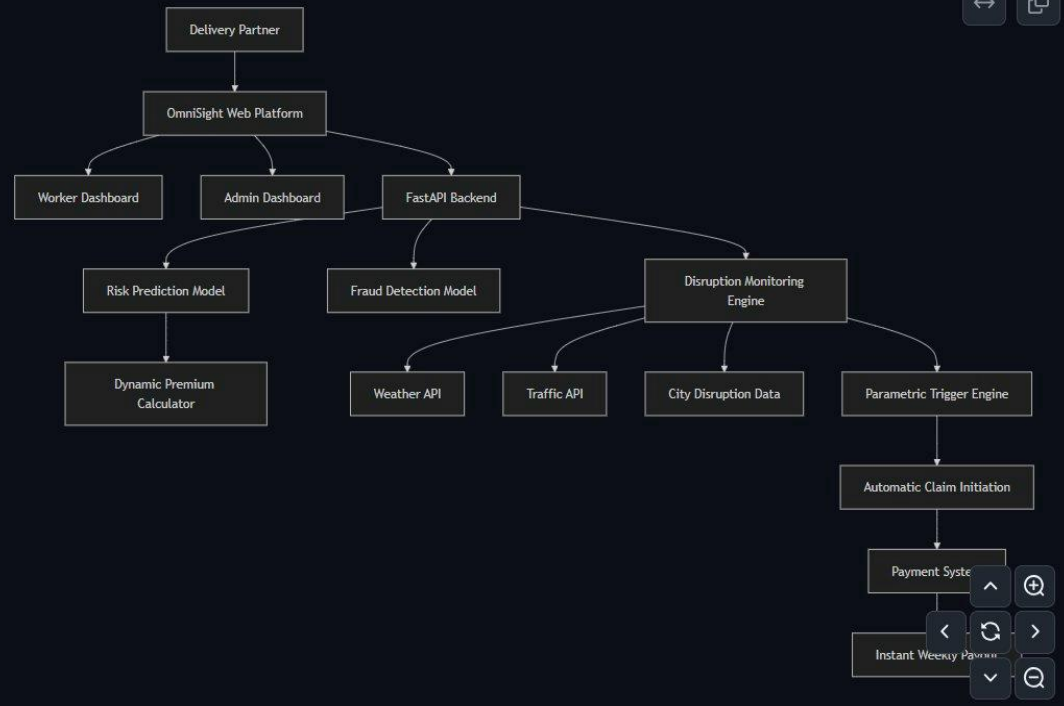
HOW DOES IT WORK?

1. **Worker Registers**
   Selects delivery zones on web platform
2. **AI Calculates Premium**
   Dynamic weekly rate from ML risk model
3. **Live Monitoring**
   Weather, traffic & city APIs watched 24/7
4. **Threshold Breached**
   Disruption parameter crosses preset limit
5. **Auto Payout Triggered**
   Fraud check → validation → instant pay

SYSTEM ARCHITECTURE

How OmniSight AI is Built

System Architecture



KEY COMPONENTS

Web Platform
Worker + Admin Dashboards

FastAPI Backend
High-performance Python API

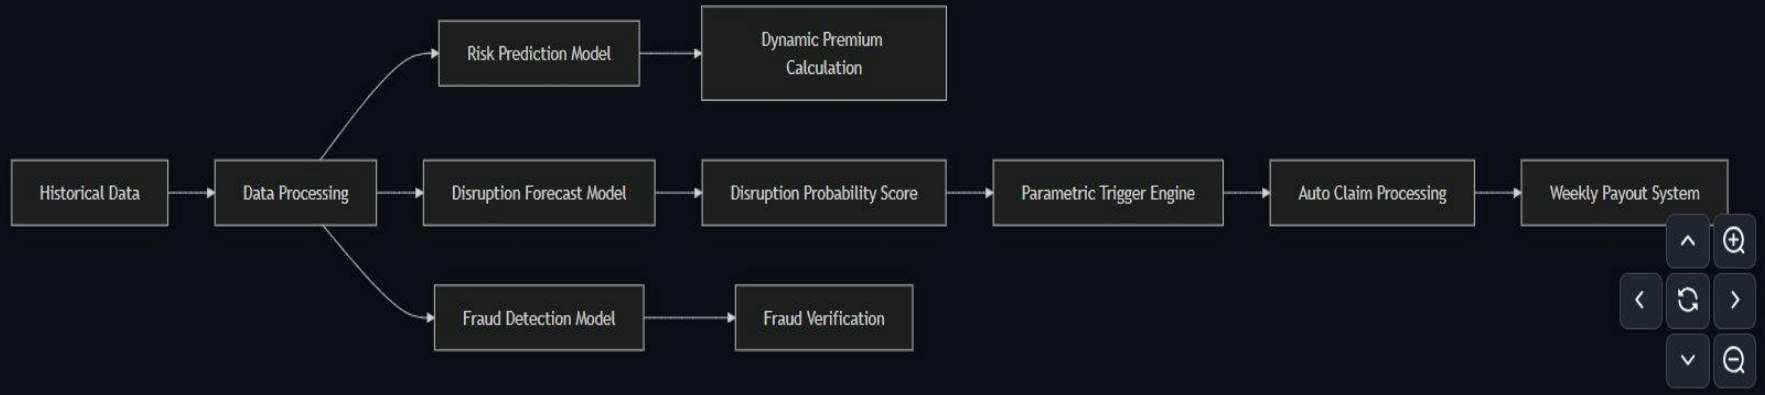
Risk Prediction
ML weekly zone risk scores

Fraud Detection
GPS spoof & anomaly checks

Monitoring Engine
Weather · Traffic · City feeds

Trigger + Payout
Auto-claim → instant payment

Intelligence Behind Every Payout



Risk Prediction Model

Analyzes historical zone data weekly. Computes a hyper-local risk score per delivery zone — higher flood history = higher score. Feeds directly into dynamic premium calculation.

Disruption Forecast Model

Uses predictive weather + historical disruption datasets to estimate probability of upcoming disruptions. Outputs a score that arms the Parametric Trigger Engine.

Fraud Detection Model

AI anomaly detection flags GPS spoofing, duplicate submissions, and fake outage reports. Only verified, legitimate claims pass through to payout processing.
